W.A. NETHUNA SAHAS

SOFTWARE ENGINEER

Kalutara, Sri Lanka | nethuna45@gmail.com | +94 72 692 0926 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 2 years of hands-on experience and a Google Analytics Certificate, specialising in architecting and shipping scalable web platforms that deliver high-performance, user-centric products to thousands of users.

PROFESSIONAL EXPERIENCE

Full Stack & AI Software Engineer, NevuCore 2024 – Present

- Build full-stack web applications end to end, from architecture and database schema to deployment, using JavaScript, PHP, React and Node.js, with integrated AI-driven features.
- Led development and deployment of the company's developer portal, a central hub for technical documentation and internal tooling.
- Established Git/GitHub workflows and CI/CD practices that streamlined collaboration and reduced integration issues.
- Used Google Analytics and performance monitoring to track engagement and drive data-informed improvements.
- Resolved performance bottlenecks in AI feature integration using asynchronous processing, keeping the system responsive under high load.

KEY PROJECTS

LMAC Learning Management System 2025 – 2026

- Designed and launched a full-scale online learning management system supporting thousands of active accounting students.
- Built secure authentication and database schemas; configured an optimised CDN for reliable video streaming.
- Reduced page load and database query times through backend query optimisation and frontend asset optimisation.
- Built responsive, mobile-first interfaces with React and Tailwind CSS, applying OOP to structure scalable backend services and reusable UI components.

NevuCore Developer Portal 2025 – 2026

- Built a responsive, interactive developer hub serving as the central repository for NevuCore's APIs and technical documentation.
- Applied clean UI/UX and user-centric design principles to ensure cross-device compatibility, accessibility and fast rendering.

3D Interactive Web Experiences & Asset Pipeline 2025 – 2026

- Built a UI/UX system connecting real-time in-game telemetry to browser-based components with low-latency synchronisation, and optimised 3D assets and rendering pipelines for high-framerate performance on mobile and desktop.

TECHNICAL SKILLS

Languages:

JavaScript	Java	PHP
Python	SQL	HTML/CSS

Frameworks & Libraries:

React.js	Node.js	Express.js
Tailwind CSS		

Backend & Databases:

REST API design and integration	backend development	database design
MySQL	authentication and access control	Query optimization
CDN configuration		

Frontend:

Responsive web design	cross-browser compatibility	accessibility-minded UI
performance optimization	UI/UX design	Mobile-first development

Tools & Platforms:

Git	GitHub	version control workflows
CI/CD basics	Google Analytics	Technical documentation
Performance monitoring		

Core Competencies:

Full-Stack Software Development	OOP	AI Integrations
Problem Solving		

EDUCATION

BSc in Software Engineering Currently Enrolled

Java Institute for Advanced Technology

G.C.E. Advanced Level – Physical Science / ICT Stream Results Pending

G.C.E. Ordinary Level – 7 A's (Mathematics, Science, ICT), 2 C's 2023/2024

CERTIFICATIONS

How to Become a Software Engineer – Alison | ID: 7327-52503024 Jul 2026

Google Analytics Certificate – Google | ID: 182975565 Valid May 2026 – May 2027

CS302: Software Engineering – Saylor University | ID: 0151448782NS Jan 2026
